

### This system is affordable

I think the system is great with less exposure time to the patient and fewer repeat studies compared to my film system. This system is affordable where other systems were just not. With the amount of studies I perform monthly, this system should pay for itself.

### We are free of all the hassles

The extremely involved procedures necessary to maintain quality control on my film/chemical based system caused me to stop taking my own films and I was sending patients to outside labs. Now with the NAOMI system we are free of all the hassles and are back to taking our own films.

### The NAOMI system is fast

The NAOMI system is fast. x-rays are viewed immediately with the patient still in the x-ray room where I complete my report of findings all on the initial office visit. This saves me time on their second office visit for additional treatment.

### Not have to wait days for result

Patients love to see cutting edge technology used in my office. They love to be able to see their x-rays immediately and not have to wait days for result from outside lab.

#### NOTE

#### Maintenance free?

Never have to touch troublesome films any more once you have NAOMI. Running stores, handling chemicals and cleaning processor will all become history. Electric power is all you need for this latest digital x-ray system.

# LESS EXPOSURE TIME TO THE PATIENT AND FEWER REPEAT STUDIES
